Penicillin Allergy Delabelling Project

10% of the population have been labelled having a penicillin allergy but **more than 90%** of these individuals are **not truly allergic**.

This **significantly effects antibiotic stewardship** and has the potential to cause **negative outcomes for our patients** when we can't use the most appropriate antibiotic.

This project will run from May 2026 - March 2027

Please complete the **Registration Form** by **April 30, 2026**

Virtual Launch Meetings available May 13, 19, or Jun 4

Learning Series Dates:
Oct 6, 2026; Dec 1, 2026;
Feb 23, 2027

from 9:00am - 12:00pm Hybrid

Physician time will be compensated & team based funding is available through a facilitated action plan with PSP.
